

1. Wifi/Bluetooth Module

Allows the Pi to have built-in Wifi and Bluetooth connection

2. SoC (System on a Chip)

Processes all the information and controls the Pi, and contains the CPU (Central Processing Unit) and GPU (Graphics Processing Unit)

3. RAM (Random Access Memory)

Accesses the memory of the Pi

4. GPIO (General Purpose Input Output)

Allows inputs and outputs to be received or sent by the Pi

5. Ethernet

Connects the Pi to an internet router and LAN (Local Area Network) via cables.

6. USB (Universal Serial Bus) 3.0

Connects the Pi to devices using USB 3.0 ports (faster and more powerful than USB 2.0)

7. USB 2.0

Connects the Pi to devices using USB 2.0 ports

8. Audio/Video

Transmits audio and video to other devices

9. Secondary HDMI

Same as Main HDMI but secondary for another output

10. Main HDMI (High-Definition Multimedia Interface)

Transmits high-quality media between the Pi and another device

11. Power

Plug in a USB-C cable connected to power here to power the computer

12. microSD Card

Stores the memory of the Pi
